9158 tokens @ \$10/1M

MONTH FORECAST

\$0.13

projected at current run-rate

DAILY BUDGET

120000

tokens/day limit

RATE

\$10

USD per 1M tokens

BASELINE (EST.)

12821

tokens without optimization  
(x1.4)

TOKENS SAVED

3663

28.6% reduction

MODELED SAVINGS

\$0.0366

USD saved via optimization

ROI SIGNAL

GREEN

executive indicator

COST BREAKDOWN (USD)

SAVINGS VS BASELINE

COST MODEL NOTES

- Actual cost = tokens used MTD × \$10 / 1M
- Baseline = actual tokens × 1.4 (estimated pre-optimization overhead)
- Savings = baseline – actual tokens
- Monthly forecast = run-rate normalized by elapsed days
- These are modeled estimates for trend visibility, not accounting P&L

Governance & Compliance

overall regression guard

GOVERNANCE FRAMEWORK

- Traffic light reflects executive budget risk (GREEN <70%, YELLOW 70-90%, RED >90%)
- Token guard validates daily budget consumption
- Routing accuracy measures auto-delegation precision
- Benchmark suite covers latency, routing, and regression guards
- NORMATIVAS-REPORTING.md defines compliance checkpoints
- Data source: .runtime/metrics/ (local-only, never committed)

EVENT STREAM

| Time                   | Type | Detail | Tokens |
|------------------------|------|--------|--------|
| Polling live events... |      |        |        |

TELEMETRY INGESTION

- Agent writes telemetry via `telemetry-writer.ps1` or `POST /api/ingest`
- Tracks tool calls, estimated tokens, files touched per session
- Refreshed every ~15s via live feed + `liveUpdate` JS poll
- Data source: `.runtime/metrics/live/activity.json` + `events.ndjson`
- Last update: —
